Beginning in September, sanitary sewer installation will begin in Millerville. In most cases a building connection will run from the main sewer to your property line. The Town desires, where possible, to accommodate property owners and to locate building connections where best suited to connect to your existing wastewater disposal system.

Please download and complete the "Connection Location Request" form. Be sure to show all connections and leaching areas on the diagram that are to be connected to one location at the new mainline sewer. Additionally please provide the measurements requested at the bottom of the form.
